PART 1 DETAIL OF DISCUSSION REQUEST/MARKET CHANGE REQUEST:

Requesting Organisation(s)	NIE	Originating Jurisdiction	NI
Contact name	Joan-Edel Smith		
Date Request Raised	20/09/2010	Originating Request	-

Detail of Request
Reason for Request

Currently Suppliers can submit a Fieldwork request (030) for a keypad meter configuration change which does not require a site visit. NIE performs the configuration change and obtains meter readings during a telephone call with the customer. This Discussion Request proposes that the Supplier submits a 030 to request the keypad configuration change, followed by a 210 which is populated with the associated readings. NIE updates PRI to perform the Tariff Configuration Code (TCC) change, and the customer is given the new configuration code at the next vend.

To improve the current process and the customer experience by removing the requirement for the telephone call to NIE

Proposed Solution

The Supplier requests a keypad configuration change, No Site Visit required (Meter Work Type K01), using 030 market message. The Supplier also submits a 210 market message populated with closing readings and the Read Reason Code "TCC update". NIE updates PRI to automatically perform the TCC change. When the customer next vends the new Meter Configuration Code (MCC) code is provided as part of the vending code which the customer keys into the keypad meter. On completion of the MCC change NIE send a 332 market message to the Supplier.

Classification of Request

Harmonisation Impacting		X	Harmonisation Baseline Version No.		TBD
