PART 1 DETAIL OF DISCUSSION REQUEST/MARKET CHANGE REQUEST:								
Requesting Organisation(s)		NIE			Originating Jurisdiction		NI	
Contact name		Joan-Edel Smith						
Date Request Raised		21/03/2011			Originating Request			
Detail of Request								
Reason for Request								
<p>Currently in NI, when a Change of Supplier 010 message is received if the Read Arrangement is set as 'MC' and the MCC is different from that at the premise, fieldwork can be raised to change the metering configuration and an associated change of usage and DUoS Group will be performed. This process allows for a change to interval metering as part of a CoS. Additionally, if the Usage Type field is populated with a value that is different from that held in NIE's systems, a change of usage will be performed on the NIE's systems.</p> <p>This Discussion Request proposes that the Usage Type field is removed from the 010 Change of Supplier market message. As a result, a change of Usage Type will be prevented from occurring on a 010 market message. Additionally, a change of DUoS Group will not be allowed as part of a Change of Supplier process.</p> <p>The rationale for this change is to further harmonise the NI and RoI processes for change of use and for tariff changes associated with a Change of Supplier.</p>								
Proposed Solution								
<p>It is proposed that the field Usage Type will be removed from the 010 message and validation of the Meter Works Type Code field will disallow any change that requires a DUoS Group change. The validation on the 010 message will be as follows: If the Meter Works Type Code is M01 and the required MCC change requires a change of DUoS Group the 010 will be rejected with reason code of IMF. If a change of usage is required then market message 013 should be submitted by Suppliers before or after the CoS process completes.</p> <p>A full list of allowable MCC changes that do not result in a DUoS Group change will be provided.</p> <p>Also, as previously described in MCR 1032 'Alignment of Meter Configuration Codes' Usage Type will be defined up front as part of the New Connections process and therefore Usage Type on a 010 for a New Connection Registration is removed.</p> <p>As the field Usage Type is only on the 010 market message it will be removed from the schema.</p>								
Classification of Request								
Harmonisation Impacting				X	Harmonisation Baseline Version No.		TBD	
NI Specific		RoI Specific		Operational	Date of Transfer from HWG			
Scope of Request
