

MIG Design Discussion Request

Discussion Request Number	Title	Priority
DR 0046	<i>Registration as an implicit request for energisation</i>	<i>High</i>

Name of Requesting Organisation	<i>Airtricity</i>
Contact name	<i>Siobhan Leane</i>
Date Request sent to ESB MOIP	<i>25/05/04</i>

Detail of Discussion Request	
<p><i>New process for registration of sites which are currently de-energised is that the receipt of the validated registration request is an automatic request for energisation. This is not how the process currently works and should not change. The current process is that the registration request is reject if the site is de-energised.</i></p> <p><i>Propose that an additional flag be added to Message 010 to indicate that for sites currently de-energised energisation should go ahead on receipt of M010 if the flag is selected – if the flag is not selected then the registration request should be rejected with a reject reason of “de-energised site”.</i></p>	
Reason for Discussion Request	
<p><i>Huge customer service issue if sites are energised and it was not the customers intention. Customers with several sites will not always know which sites are de-energised.</i></p> <p><i>It is not workable that a supplier checks the MPRN publication dataset for every application they receive from a customer.</i></p> <p><i>Issue of transaction charges associated with automatic energisation (cancellation charge; energisation charge & de-energisation charge”.</i></p>	
Market Design Documents impacted by Request	
<p><i>MPD 1 & 2 V4.1</i></p> <p><i>Registration Market Messages Implementation Guide V4.1.1</i></p> <p><i>XML schema V4.1</i></p>	
Date of MIG where discussed	<i><to be completed by ESB MOIP></i>
Change Request xref (if applicable)	<i><to be completed by ESB MOIP></i>
