Detail of Discussion Request

Background:

In order to facilitate preparation by the market for the changes associated with the SEM, version 6.1 of the schema issued some time ago. Version 6.1 included some extra code values to facilitate future market changes that have been signalled but not yet released. The purpose of this DR is to add these value to the market design baseline for SEM, thus bringing the baseline into line with version 6.1 of the schema as released.

Neither of these code values will be used on any market message until the change requests for the associated process changes are raised and approved.

This Discussion Request proposes the addition of two new reject reason codes to V6.1 of the schema due for release on November 1st 2007:

1. NQE – Not QH Eligible
2. ICL - Implied CoLE

Detail:

NQE

This Reject Reason Code will be added to the schema and a separate Discussion Request will be raised to cover to the inclusion of this reject reason code on 130R message in the specific circumstance where a supplier requests a change of metering (030 message) from NQH to QH for a site that is not deemed eligible for QH metering, the new reject reason code 'NQE' will appear on the relevant 130R message.

ICL

This Reject Reason Code was previously included in MCR 0078 – Add validation to use of Registered Company number and this Discussion Request only proposes the addition of the Reject Reason Code 'ICL' to the schema. This Reject Reason Code will not be used on any market message until the registered company number validations are implemented; the timescale for this implementation is unclear at present. MCR 0078 will be revised and re-issued in due course to cover the associated validation changes in the market systems.
