

Defect Resolution Request

Defect ID	Title	Priority
DRR 0056	Changes to MPCC to correct defects	High

Defect	
Date raised	3/11/04
Contact name	Tony Conefrey – ESB MOIP
Date issued to MIG	

Part 1: Detail of Defect & Proposal

- As a result of ongoing testing a number of defects have been detected on the MPCC software
- Where two or more consecutive messages containing readings (010, 016, 210, 208) are created each message will contain both its' own meter readings as well as previous ones. This must be corrected
 - Filename not currently in 600 Error Message generated by MPCC
 - MM208 Meter Tab data creation problem - problem saving message if you navigate to main tab and back again.
 - Files arriving from MRSO onto MPCC do not have a .XML file extension.
 - A number of market messages outbound from Suppliers to ESB Networks contain optional Boolean fields. When these messages are created using Webforms, saved and subsequently updated, these optional fields are being populated in error. This should be corrected.
 - The datacodes.xml file distributed with the MPCC does not contain the XML version number. Therefore there is a risk that the MPs cannot identify if the datacodes they have installed are the correct datacodes for the release of the XML that they are using. The XML version number will be included in the datacodes.xml file.
 -

Impact of Defect on Market Processes

Incorrect operation of MPCC

Proposal

Proposal Type (please tick one)
