Part 1: Detail of Defect & Proposal

Defect

Currently the field 'Count of MPRN', which was added to message 501 as a result of MCR 003, sits at Additional Aggregation Data – Level 5. This level includes the fields Time of Use, Total Usage Factor & Count of MPRN.

Given that the count is at MPRN level the number of MPRN reported per Day & Night Times of Use effectively double counts those MPRN with load profiles for these times of use.

Proposed resolution

In the period following Go-Live it is proposed to move the field Count of MPRN to Additional Aggregation information – Level 4 directly after the field Load Profile. The count of MPRN here will be an accurate record of the number of MPRN for the DLF Code & Load Profile combination for the Supplier & SSAC being aggregated.

However, given the difficulties high-lighted by Market Participants in absorbing changes to the XML schema it is proposed that, in the short-term, the field would be left blank with the count of MPRN available to Market Participants on request from MRSO.

The Defect Resolution will be progressed post go-live.
