

Defect Resolution Request

Defect ID	Title	Priority
DRR 0100	Future De-registration date validation to be added to Guide	Low

Defect			
Date raised	12/12/05	Contact name	Tim Cragg
Date issued to IGG			

Part 1: Detail of Defect & Proposal

The validation instructions for required date on market message 021 (p39) state that:

MRSO will check that:

- o The required date is not retrospective to the date of receipt by MRSO
- o The required date is not more than *<value yet to be determined>* working days later than the date of receipt by MRSO

The Meter Point has been de-energised for six months at the required date. If it has not then, in the certain circumstances outlined in MPD21 the request may be referred to DSO or TSO for acceptance or rejection; otherwise the request is rejected.

It is proposed that this should now read as below because the validation has been determined and added to the system validation for this message:

MRSO will check that:

- o The required date is not retrospective to the date of receipt by MRSO
- o The required date is not more than **10** working days later than the date of receipt by MRSO

The Meter Point has been de-energised for six months at the required date. If it has not then, in the certain circumstances outlined in MPD21 the request may be referred to DSO or TSO for acceptance or rejection; otherwise the request is rejected.

Impact of Defect on Market Processes

Addition of number of working days to validation instruction in Guide
