### Detail of Change Request

Currently Exchanged Meter Reference is provided in the new and removed Meter ID Segments of the 332 and 331 messages even when a physical exchange of Meter has not taken place. E.g. New Connections, Meter Re-configurations.

See example 332 / 331 Meter ID segments below:

The purpose of this item is to allow Suppliers to identify which meter has been exchanged for which new meter in the case of like for like exchanges.

A like for like exchange can be defined as the exchange of one meter for another with the same configuration e.g. a Day / Night Meter for a Day / Night Meter.

It is proposed to provide this item only where a like for like meter exchange has taken place. i.e. not for New Connections or where a meter has been re-configured from NQH to QH or where a non like for like exchange has taken place.

No change to the Market Message Schema is required because this item is already optional on the 332 / 331 Messages. This change only requires a change to the logic in Networks ISU and for Suppliers to be aware of this change in logic.

It is confusing to Suppliers if they receive this field where a physical exchange of metering has not taken place and giving this information in this scenario is outside the intended use of this field.

Currently Exchanged Meter Reference is provided in the new and removed Meter ID Segments of the 332 and 331 messages even when a physical exchange of Meter has not taken place. E.g. New Connections, Meter Re-configurations.
