WP 0002	<i>Requesting Registration of De-energised Sites</i>	WA	Active

Date Raised	10/11/04	Implementation Date	04/01/05
-------------	----------	---------------------	----------

Change History
<p>10/11/04 Version 1.0 Issued 28/02/05 Version 1.1 Issued Version (No changes to this WP) 07/03/05 Version 1.2 Issued Version (No changes to this WP) 14/03/05 Version 1.3 Issued Version – WP 0002 set to Active</p>

Identification of Retail Market Design Baseline Products Impacted
<p><i>Identification of Retail Market Design Baseline Products Impacted</i></p> <p>MPD 1 Change of Supplier – NQH Metered MPD 2 Change of Supplier – QH Metered</p>

Reason for Working Practice
<p>MCR 0035 - Registration as an Implicit Request for Energisation was rejected on the basis that the MPRN Status will be published as part of the MPRN Publication facility.</p> <p>The proposal to rely exclusively on Suppliers use of the MPRN Publication as a means of avoiding the inadvertent registration of de-energised sites was not viewed as acceptable by the market participants. The following working practice formally documents a revised proposed workaround</p>

Working Practice
<p>In order to limit the possibility of a Supplier inadvertently requesting the registration of a de-energised site ESB Networks will continue its current practice of not re-energising premises unless there is a person present.</p> <p>As a further safeguard Suppliers who do not wish de-energised sites to be energised upon receipt by MRSO of a registration request should check the Energisation Status for the MPRN on the MPRN Publication web facility. In cases where the site has a de-energised status then the 010 request should not be submitted until such time as the customer is happy for the site to be energised</p>
