Detail of Request

Reason for Request

This discussion request proposes that NIE further harmonises on the use of market message 303R. It was originally agreed at harmonisation that NIE would use the 303R market message to reject Supplier Provided Readings on market messages 010, 016 and 210 in the following circumstances:

- The meter details are incorrect, in which case the Available Meter Id details are populated on message 303R using the meter details held by NIE.
- The read date or required date is dated in the future, is absent, or predates the most recent DUoS bill.
- One or more of the readings are implausible.

Further harmonisation on the use of market message 303R

Proposed Solution

NIE will use the 303R market message only to reject invalid metering details or invalid read/required dates on Supplier Provided Reads for market messages 010, 016 and 210 i.e. the 303R will not be used where one or more of the readings are implausible.

Where meter details and date of the reading do pass the validation rules the reading will be uploaded and only at this point will the reading be deemed plausible or implausible based on the Hi/Lo parameters. If the readings are implausible then a user will decide whether the reading can be made plausible or not. This would be performed according to business rules/practices.

In the COS process if a Supplier provided customer reading is to be estimated because of an implausible read but the Supplier has not indicated on the 010 for an estimate to be used then it will be out sorted for a user. At this point the user will contact the Supplier to look for another customer reading. The process will only complete once a valid actual reading is in place otherwise the 010 will time-out after the allowed time.
