# Eircode Batch Update Process

- Market participants are reminded of the following measures required to support the successful completion of the ESNB driven Eircode Update process while supporting normal market operations:
  - **In advance of and during** this process:
    - Eircode updates **should not be** triggered by market participants via the 'Change of Customer Details' process (013MM).
    - Eircode updates **should not be** triggered by market participants via the 'New Registration' process (010MM) **unless** they have first verified that the MPRN in question already has a value displayed in the 'Post Code' field on the ROI RMP Extranet System.
  - **During** this batch processing period:
    - A specific MM114 will be sent for each MPRN updated by this process.
    - In line with existing market design, it is possible that more than one MM114 may be issued for a given MPRN on a specific day, dependent on any associated 'work in progress' market process(es)
  - **After completion** of this process:
    - The agreed mechanism for market participants to change an Eircode is via the **'Change of Customer Details'** market process (013MM).
