Message

## 591 Non Interval Aggregation

The following statement will be true for the composition of the 591 Market Message

Invalid Combinations should not be populated in the message, however if there are no MPRNs registered for a valid combination then a count of zero should be populated in the message

The implication of this statement is that where the DLF is LV:

the count of MPRNs , Load profile and DLF will always be included for each of the Load Profiles 01-12 in the segment Additional Aggregation Information

And where the Count of MPRNs is zero, none of the lower level segments will be populated viz no Additional Aggregated Consumption, no Additional Aggregation Data segments for that Load Profile/DLF combination

where the DLF is not LV:

there should be none of the segments : Additional Aggregation Information , Additional Aggregated Consumption, Additional Aggregation Data segments
